ABOUT ME

Final-year Software Engineering student passionate about backend systems - API design, database architecture, and the engineering problems that come with scale, like concurrency control and access management. I built and deployed two full backend systems from scratch - from database design to CI/CD to solving real concurrency bugs - to understand how production systems actually work. Looking for a backend internship where I can apply these skills on a real product and learn from an experienced engineering team.

PROJECTS

IT Asset Management System - github.com/iamnvanh205/itam-system | Demo: itam-system-olive.vercel.app

Java 21, Spring Boot 3.5, React 19, TypeScript, PostgreSQL (Neon), JWT, Docker

- Built a full IT asset lifecycle system (purchase → assignment → maintenance → disposal) to replace manual Excel tracking, designed with a multi-branch-ready data model from day one.
- Implemented a 3-step approval workflow (Employee → Manager → IT Staff) and role-based access control across 4 roles (Admin, IT Staff, Manager, Employee).
- Built QR-based asset audits using the phone camera, with automatic discrepancy detection between scanned and recorded data.
- Wrote unit + integration tests (Testcontainers) run on every PR, and set up a full CI/CD pipeline: Docker build → push to GHCR → auto-deploy to Render (backend) and Vercel (frontend).
- 13 technical docs covering architecture, database design, API, and deployment - github.com/iamnvanh205/itam-system/tree/main/docs

Event Ticketing System - github.com/iamnvanh205/event-ticketing

Spring Boot, React, TypeScript, PostgreSQL, WebSocket/STOMP, JWT/OAuth2

- Built an event ticketing platform to solve a specific hard problem: preventing ticket oversell and duplicate check-ins when many users compete for the same limited tickets.
- Designed and tested a reserve-then-confirm booking flow that correctly handles 50 concurrent requests competing for the last ticket, with no overselling.
- Built a real-time organizer dashboard (WebSocket/STOMP) and QR-based check-in flow, with role-based access across Admin, Organizer, Checkin Staff, and Customer.
- Deployed the full stack (Render + Vercel + Neon) - currently working on getting a stable public demo link.

EDUCATION

Hanoi Open University

Faculty of Information Technology - Major: Software Engineering

2023 – 2027 | GPA: 3.1/4.0

SKILLS

- Languages: Java, JavaScript, TypeScript, SQL
- Frameworks: Spring Boot, Spring Security, Hibernate, JPA
- Databases: PostgreSQL
- DevOps: Docker, Git, GitHub Actions, Linux
- Architecture & Concepts: REST API, Microservices, JWT Authentication, Concurrency Control, Clean Architecture, SOLID
- Soft skills: Problem Solving, Technical Documentation, Self-Directed Learning, Agile Development
